

NatPower

GREEN HYDROGEN FOR PLEASURE BOATING

Nanterre, 15 April 2024

**VINCI signs a strategic partnership agreement with NatPower SA,
an international renewable energy development platform,
notably to fast-track Cobra IS's expansion in the United States**

VINCI has finalised an investment amounting to approximately €50 million in NatPower SA, a renewable energy development platform set up in 2019 and principally active in Italy, Great Britain and the United States.

The investment encompasses the acquisition of 10% of the company's share capital from its founder Fabrizio Zago and from the Tyrus Capital fund, in addition to convertible bonds enabling the Group to increase its stake then possibly exercise an option giving it control over NatPower SA.

Under the agreement, VINCI will have a priority right on opportunities to acquire projects in the ready-to-build phase initiated by NatPower SA.

Alongside the investment, the parties have reached an agreement to jointly develop renewable energy projects (principally onshore wind and solar) in the United States, notably building up on NatPower SA's existing portfolio in this segment (which includes approximately 1.2 GW of capacity plus about 2 GW at the preliminary stage). To this end, a joint venture, controlled by VINCI via its subsidiary Cobra IS, will be incorporated in the United States.

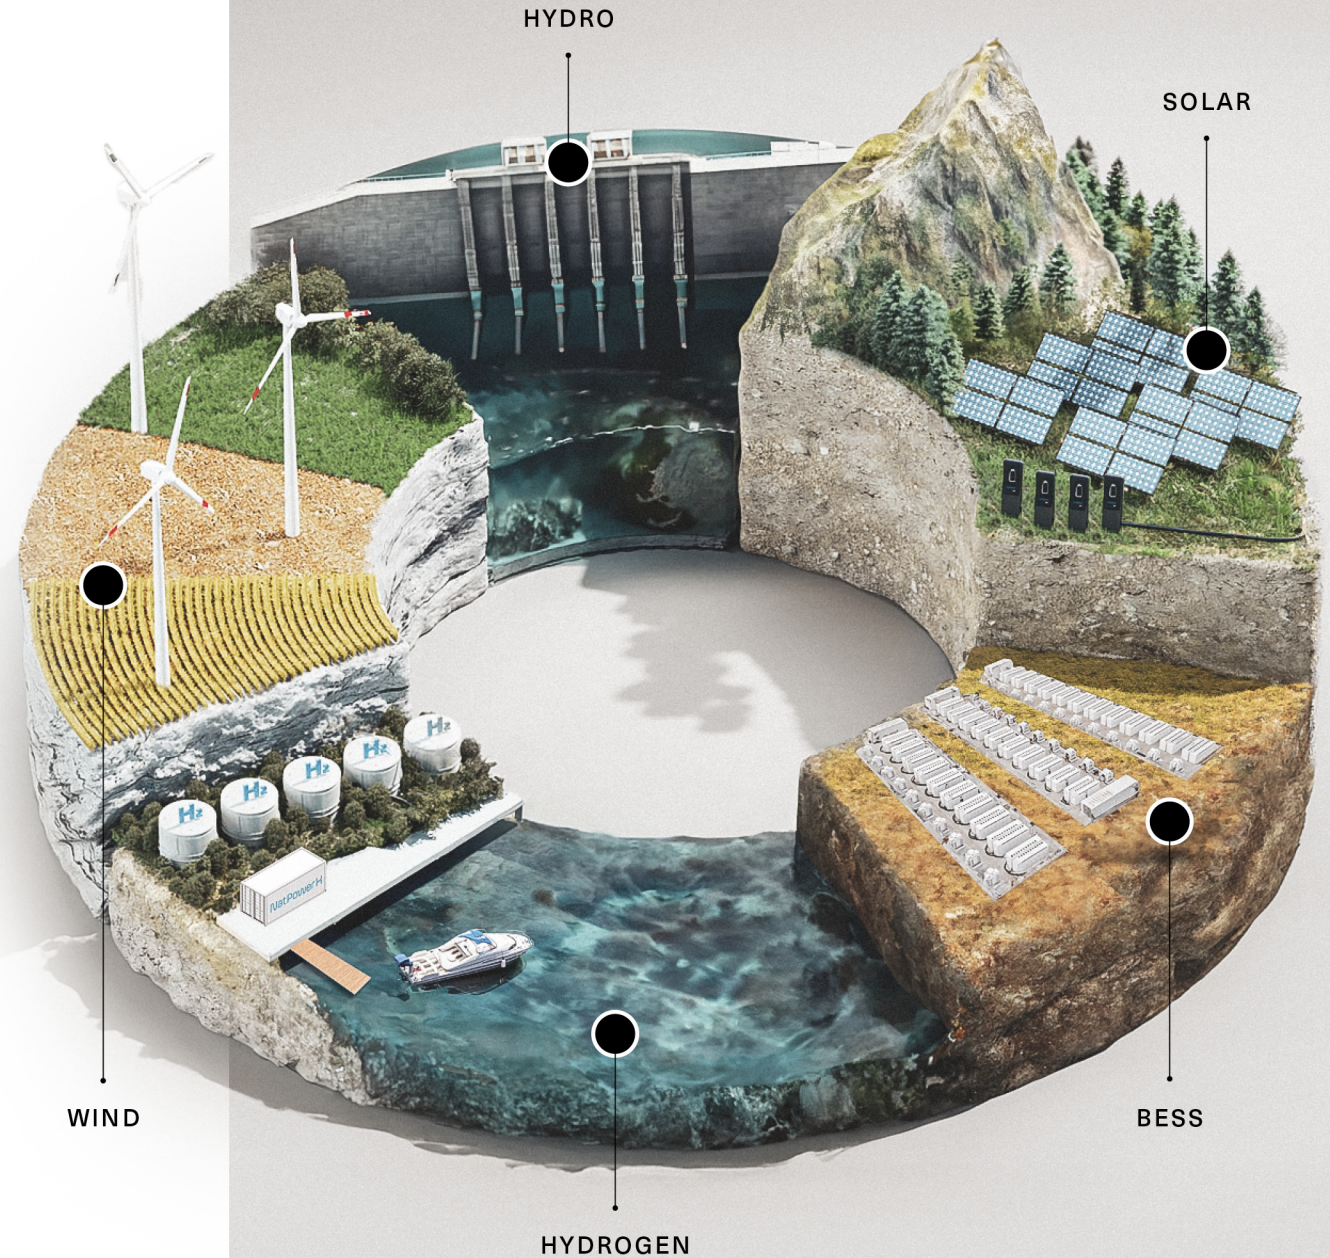

Lastly, leveraging NatPower SA's expertise, VINCI will be in a prime position to develop energy storage projects, particularly in Great Britain.

NatPower is an independent renewable energy development platform

YEAR	2019
FOUNDER	Fabrizio Zago
PROPOSITION	Creating valuable investment opportunities for institutional long term investors.

Thanks to the 25 years of experience gained from green field development to constructions, from operations of clean power generation and consumption plants, electric vehicle charging networks, to financing and refinancing of sustainable energy assets NatPower contributing to the energy transition by globally sourcing investment grade projects to leading energy players. NatPower's geographic project distribution encompasses Europe, North America, South America, and Central Asia.

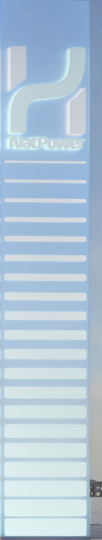

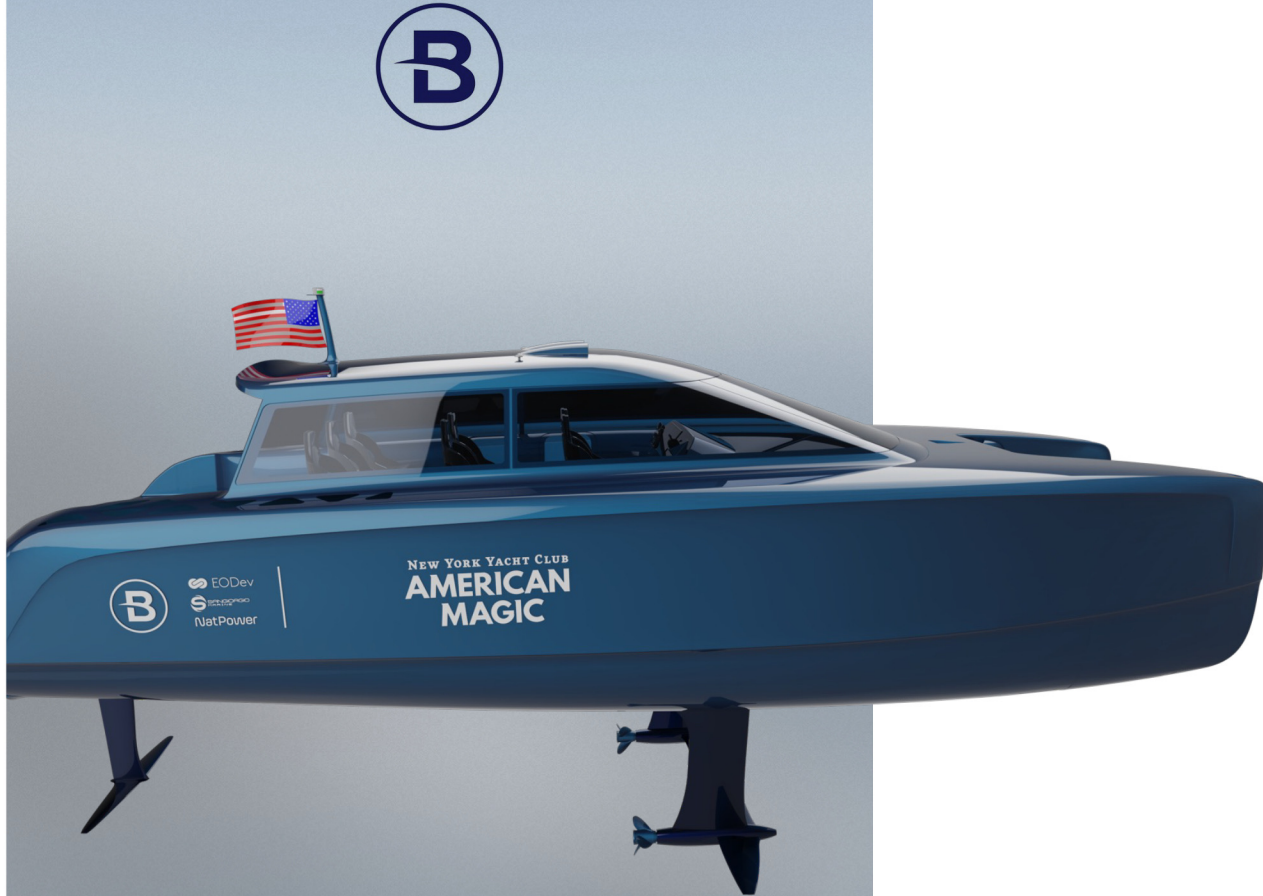

NatPower H₂

hydrogen energy shaping the future of navigation

We have successfully executed binding agreements to secure port concessions or sub-concessions, with a **current pipeline encompassing 25+ marinas and ports.**

Bluegame, a distinguished brand under the San Lorenzo shipyard, has entered into a groundbreaking agreement for the conceptualization and construction of a hydrogen-powered chase boat with two out of the six teams slated to participate in the 37th America's Cup.

NatPower H proudly assumes the role of the official technical sponsor for Bluegame in the America's Cup 2024, offering support to both the New York Club American Magic (US) and Orient Express Racing Team (FR) teams.

Our commitment involves the supply of green hydrogen and implementation of refueling safety procedures for the two chase boats throughout the testing and preparation phases of the competition. The event is slated to take place in Barcelona from August to October 2024.
